Remarks:

GENERAL NOTES:

- Mounting holes are optional. 0.375" diameter holes on 6" centers from the centerline of the fin height and finned length are typical for all flanges. Not available when S < 1".
- 2. Jackscrews are provided to facilitate head removal.
- 3. All dimensions are in inches.
- 4. The supply line should be connected to the lower connection on the "leaving air" side for counterflow operation.
- 5. 1" wide reinforcement bars may extend past flanges.
- 6. Phenolic coated coils require a longer lead-time since they must be re-tested after coating.
- 7. Intermediate tube supports are fabricated from heavy gauge stock and supplied per the chart below.
